Art Unit: 1714

The allowance is withdrawn due to new ground of rejection.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 30 and 33-45 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

This is NEW MATTER rejection since the recited "**about**" for the amount of components lacks support in the originally filed specification. The original specification teaches the exact amount and thus the scope of claim is broader than the actual invention.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and

Art Unit: 1714

the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 30, 32, 36, 37 and 41-45 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Venable (US 3,886,076).

Venable teaches a compression molding composition comprising 35-42 wt.% of water, 1-3.5 wt.% of chopped (inorganic) glass fiber, 13.5-21 wt.% of an inorganic binder and fillers in abstract and examples and at col. 2, lines 26-33. Said inorganic binder (Alkophos) is suspended in liquid (col. 3, line 58 to col. 4, line 13 and col. 6, line 66) and said liquid would be water as evidenced by teaching at col. 4, line 11. 1-3.5 wt.% of chopped (inorganic) glass fiber would be a sufficient amount to be bound by the inorganic binder during compression molding inherently.

Thus, the instant invention lacks novelty.

Claims 33-35 and 38-40 would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims and if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 1st paragraph, set forth in this Office action since Venable teaches away from the instant amount of carrier solvent (water) at col. 7, lines 22-34 and does not teach the use of any organic material such as polymer and since said inorganic binder (Alkophos) is used to bind the expanded perlite, and thus there is no reason to use colloidal silica.
